JQXD-300 lifting unloader:

Equipment structure and functional principle:

The automatic unloading machine is mainly suitable for the automatic unloading of empty tanks. The empty tanks stacked on the stack plate are lifted from the bottom to the conveyor and used with the empty tank sprinkler. It is an essential

ideal equipment for large and medium-sized beverage and can manufacturers.

Principle: The forklift will stack the empty tank on the tray conveyor, and then the conveyor delivers it to the tray lifting platform of the main engine. The trestle lifting platform is to lift the positioned empty tank tray to the unloading height. After the tank is unloaded and the empty tank is unloaded, the empty tray is placed on the conveyor. The empty tank is driven by the cylinder and the baffle, pushing the whole layer of the empty tank to the network conveyor, and then returning to the preparation position to continue to push out the next layer. After unloading the empty tank, the empty stack is transported out by the rear of the shipper, and then the stack is removed by forklift or manually.

The stacking direction, the tank outlet direction and the position of the operator table can be changed flexibly according to the user requirements, but the user should provide the plane position map.

Main technical parameters:

type:	JQXD-300
roductive power:	0~ 300 cans / minute
aggregate capacity:	3.5KW

Address: Shenjiamen, Dayan Biological Park, Putuo District, Zhoushan City, Zhejiang Province, China
Address: Da Gan Biological Garden, ShenJiaMen, PuTuo District Zhou Shan City, ZheJiang Province, P.R China

supply voltage:	380 V 50HZ 3 phase + N + G
control voltage:	24 V DC/AC
weight:	2660Kg
Tray size	1100×1400mm
outline dimension:	7500×4500×3500mm
Network belt length:	2.5 Meters

Address: Shenjiamen, Dayan Biological Park, Putuo District, Zhoushan City, Zhejiang Province, China

Address: Da Gan Biological Garden, ShenJiaMen, PuTuo District Zhou Shan City, ZheJiang Province, P.R China
